ATMOS

High performance, high mobility, versatile platform

Elbit Systems' ATMOS is a 155mm/52 caliber truck-mounted howitzer that offers the advantages of superior fire power, enhanced mobility and rapid response time. Highly adaptable, the modular ATMOS system is compatible with any 6x6 or 8x8 high-mobility tactical truck. ATMOS supplies fire support for all types of missions and can be easily interfaced with customers' existing C'I systems.

Part of Elbit Systems' line of fully integrated, modular artillery solutions, ATMOS incorporates an embedded electronic suite, automatic laying system and automatic loading system. The advanced electronic suite effectively enables accurate navigation and autonomous operation, reduced crew size, increased fire power and high precision accuracy.

Flexible platform configurations

The ATMOS can be mounted on any adapted high-mobility 6x6 or 8x8 truck chassis preferred by the customer. The protected cabin of the ATMOS is designed for a crew of 2-6 personnel, a driver, a commander, and an additional three to four crew members along with all personal equipment and small arms. The cabin is equipped with an air conditioning system that is capable of both heating and cooling. The concept behind the ATMOS can be applied to modernization of legacy towed guns, incorporating advanced new technologies like INS, MVR, ballistic computers, C⁴I, hydraulics and electrical drives.

Superior firepower capabilities

The ATMOS achieves ranges exceeding 40km with ERFB-BB ammunition and suitable propelling charge.

Designed specifically for rapid deployment and operation on difficult terrain, the ATMOS's shoot-and-scoot capabilities are supported by an integrated electronic suite incorporating an INS-based laying system, as well as an automatic loading system that reduces crew effort.

The ATMOS can fire all types of qualified 155mm ammunition, projectiles and charges that are in use by NATO and other countries. On board containers store a minimum of 18 rounds, including projectiles, propellants and fuzes.

Battle-proven and fully operational

A fifth generation ATMOS provides advanced fire support for a wide range of missions and is operational in artillery forces around the world.

ATMOS

High performance, high mobility, versatile platform

Key Benefits

- Available in multiple configurations
- High tactical mobility
- High firepower capabilities
- Rapid deployment and response time
- Protected crew cabin – configurable to customer's requirements
- Combat proven and fully operational
- Integrated logistic support and all-level maintenance program
- Low life-cycle cost

Key Features

- Suitable for any 6x6 or 8x8 in-service truck
- Versatile automatic and semi-automatic loader
- Advanced firepower
- First round within 30 seconds
- 6 rounds in less than 110 seconds - shoot and scoot
- Indirect firing capability – 8 rounds per minute
- Direct firing day and night
- MRSI capability – up to 5 rounds
- Integrated solution for smart ammunition
- Time-on-target capability
- Integrated with a complete electronic suite
- Integrated with system command and control at all levels
- Fully compatible with customer's existing C4I system
- Fires all types of NATO-compatible 155mm ammunition
- Modular on-board ammunition storage
- Operational by 2-6 crewmembers, per customer requirements
