

M67 IM Hand Grenade

Unique safety features for improved operation, safe storage and transit

The M67 IM - HE fragmentation grenade offers enhanced safety features and improved operational reliability. A unique fuze with a safety and arming (S&A) mechanism enables safer storage and transportation with fewer restrictions.

Improved safety: The M67 IM is equipped with a unique safety clip that provides enhanced protection against unintentional safety pin damage. The grenade requires two movement factors for removal of the safety pin, and includes peripheral protection on the fuze housing. The grenade offers the option of an additional thumb clip. In compliance with the latest safety requirements for fuzes-MIL-STD 1316 and for Insensitive Munitions (IM) MIL-STD 2015, the M67 IM hand grenade delivers a bullet impact of 0.5", Fast Cook-off (bare and packed), Slow Cook-off (bare and packed) and sympathetic detonation. Initiation of the detonation chain sets off an audible bang.

Operational reliability: The M67 IM is similar in lethality, handling operation, and dimensions to the basic M67 grenade.

M67 IM Hand Grenade

Unique safety features for improved operation, safe storage and transit

Key Features

- Weight: 400gr
- Height: 91mm
- Filling: 185gr Comp.B
- Diameter: 64mm
- Delay time: 4.5 ± 0.5 sec

Key Benefits

- Best-in-class safety features
- Safer transit and storage
- MIL-STD 1316 and MIL-STD 2105
- Dangerous Goods Classification 1.1D (can upgrade to 1.6 in accordance with client request)
