Non-GAAP Financial Data

Non-GAAP financial data, including Adjusted gross profit, Adjusted operating income, Adjusted net income, and Adjusted diluted earnings per share, is presented to enable investors to have additional information on our business performance as well as a further basis for periodical comparisons and trends relating to our financial results. We believe such data provides useful information to investors and analysts by facilitating more meaningful comparisons of our financial results over time. The non-GAAP adjustments exclude amortization expenses of intangible assets related to acquisitions that occurred mainly in prior periods, capital gains related primarily to the sale of investments, Covid-19 related expenses, revaluations of investments in affiliated companies, non-operating foreign exchange gains or losses, one-time tax expenses, and the effect of tax on each of these items. We present these non-GAAP financial measures because management believes they supplement and/or enhance management's, analysts' and investors' overall understanding of the Company's underlying financial performance and trends and facilitate comparisons among current, past, and future periods.

Specifically, management uses Adjusted gross profit, Adjusted operating income, and Adjusted net income attributable to the Company's shareholders to measure the ongoing gross profit, operating profit and net income performance of the Company because the measure adjusts for more significant non-recurring items, amortization expenses of intangible assets relating to prior acquisitions, and non-cash expense which can fluctuate year to year. We believe Adjusted gross profit, Adjusted operating income, and Adjusted net income attributable to the Company's shareholders are useful to existing shareholders, potential shareholders and other users of our financial information because they provide measures of the Company's ongoing performance that enable these users to perform trend analysis using comparable data.

Management uses Adjusted diluted earnings per share to evaluate further adjusted net income attributable to the Company's shareholders while considering changes in the number of diluted shares over comparable periods. We believe Adjusted diluted earnings per share is useful to existing shareholders, potential shareholders and other users of our financial information because it also enables these users to evaluate adjusted net income attributable to Company's shareholders on a per-share basis.

The non-GAAP measures used by the Company are not based on any comprehensive set of accounting rules or principles. We believe that non-GAAP measures have limitations in that they do not reflect all of the amounts associated with our results of operations, as determined in accordance with GAAP, and that these measures should only be used to evaluate our results of operations in conjunction with the corresponding GAAP measures.

Investors are cautioned that, unlike financial measures prepared in accordance with GAAP, non-GAAP measures may not be comparable with the calculation of similar measures for other companies. They should consider non-GAAP financial measures in addition to, and not as replacements for or superior to, measures of financial performance prepared in accordance with GAAP.
